

To research other companies and their systems on the UL site, [click here](#). Or, you can go directly to the UL website at www.ul.com. Scroll to bottom of home page and click on “Online Certifications Directory”. If they appear, be sure to look at what is listed. Some companies try to point to several accessories purchased from someone else instead of referring to their own system. Please feel free to contact us or UL directly regarding any related questions. Again, if the entire system is not certified, there is no assurance all of the components will function together in a safe and effective manner. The UL (Underwriters Laboratories) logo, as seen on our home, is on most of the electrical products you use each day for a reason. The “UL” logo gives inspectors, installers, contractors,

electricians, architects, homeowners, and building owner's peace of mind knowing that all the components have been thoroughly tested as an entire system. HotEdge takes safety very seriously, which is why we've undergone testing with UL over the course of several years for our metal panel systems.
